Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C. I. FUNCTION. BIFUNCTIONAL ENZYME WITH BOTH ATP SULFURYLASE AND APS

KINASE ACTIVITY, WHICH MEDIATES TWO STEPS IN THE SULFATE

GROUP TO AIP TO YIELD ADENOSINE 5'-PHOSPHATE GROUP FROM ATP TO AFE

SECOND STEP IS THE TRANSFER OF A PHOSPHATE GROUP FROM ATP TO APS

VIELDING 3'-PHOSPHADADENYLXLSULFATE (PAPS: ACTIVATED SULFATE DONOR USED BY SULFOTRANSFERASE): IN MAMMALS, PAPS IS THE SOLE SOURCE OF SULFATE; APS APPEARS TO BE ONLY AN INTERMEDIATE IN THE SULFATE-

C. SULFATE; APS APPEARS TO BE ONLY AN INTERMEDIATE IN THE SULFATE-

C. SULFATE, APS APPEARS TO BE ONLY AN INTERMEDIATE IN THE SULFATE-

DURING POSTMATAL GROWTH (BY SIMILARITY).

C. I. CATALYTIC ACTIVITY: ATP + adenylylsulfate = Abphosphate + adenylylsulfate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Phosphodenylylsulate.

PATHWAY: BELONGS TO THE SULFATE ASSIMILATION PATHWAY THAT LEADS TO THE BIOSYNTHESIS OF CYSTEINE AND METHIONIES, AND TO THE SULFATION OF PROTEINS, CARBOHYDRATES, LIPIDS, DANGS AND XENOBIOTICS.

ALTERNATIVE PRODUCTS: 2 isoforms; a (shown here) and b; are produced by alternative splicing.

TISSUE SPECIFICITY: EXPRESSED IN CAPTILAGE.

DISEASE: DEFECTS IN PAPESS ARE THE CAUSE OF SPONDYLOEPIMETAPHYSEAL DISEASE: DEFECTS IN PAPESSED IN CAPTILAGE.

PREMARILY ENDINYSEAL WITH ONLY MILD METAPHYSEAL ABNORMALITIES.

SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE APS KINASE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PIODUM, FUNCTORY, TITGROUGES; apsK; 1.

Biol. Chem. 270:29453-29459(1995).

FUNCTION: BIFUNCTIONAL ENZYME WITH BOTH ATP SULFURYLASE AND APS KINASE ACTIVITY, WHICH MEDIATES TWO STEPS IN THE SULFATE ACTIVATION PATHWAY. THE FIRST STEP IS THE TRANSFER OF A SULFATE GROUP TO ATP TO YIELD ADENOSINE 5'-PHOSPHATE GROUP FROM ATP TO APS SECOND STEP IS THE TRANSFER OF A PHOSPHATE GROUP FROM ATP TO APS VIELDING 3'-PHOSPHADENYLYLSULFATE (PAPS: ACTIVATED SULFATE DONOR SULFATE; APS APPEARS TO BE ONLY AN INTERMEDIATE IN THE SULFATE ACTIVATION PATHWAY. ALSO INVOLVED IN THE BIOSYNTHESIS OF SULFATED ASSELBCTION ACTIVATION PATHWAY. ALSO INVOLVED IN THE BIOSYNTHESIS OF SULFATED ASSELBCTION.
                                                                                                                                                                                                                                                                                                                                                                                                                                             -1- CATALYTIC ACTIVITY: ATP + SULfate = diphosphate + adenylylsulfate.
-1- CATALYTIC ACTIVITY: ATP + adenylylsulfate = ADP + 3'-
phosphoadenylylsulfate.
-1- PATHWAY: BELONGS TO THE SULFATE ASSIMILATION PATHWAY THAT LEADS TO THE BIOSYMTHESTS OF CYSTEINE AND METHIONINE, AND TO THE SULFATION OF PROTEINS, CARBOHYDRATES, LIPIDS, DRGGS AND XENOBIOTICS.
-1- TISSUE SPECIFICITY: EXPRESSED IN THE NEONATAL BRAIN AND IN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ATP (POTENTIAL).

TISSUE SPECIFICITY: EXPRESSED IN TESTIS, PANCREAS, KIDNEY, THYMUS, PROSTATE, OVARY, SMALL INTESTINE, COLON, LEUKOCYTES AND LIVER.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              KINASE ACTIVITY, WHICH MEDIATES TWO STEPS IN THE SULFATE
ACTIVATION PATHWAY. THE FIRST STEP IS THE TRANSFER OF A SULFATE
SECOND TO APP TO VIELD ADENOSINE 5'-PHOSPHOSULFATE (APS), AND THE
SECOND STEP IS THE TRANSFER OF A PHOSPHATE GROUP FROM ATP TO APS
YIELDING 3'-PHOSPHOADENYLYLGSULFATE (PAPS: ACTIVATED SULFATE DONOR
USED BY SULFOTRANSFERASE). IN MAMMALS, PAPS IS THE SOLE SOURCE OF
SULFATE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ACTIVATION PATHWAY. ALSO INVOLVED IN THE BIOSYNTHESIS OF SULFATED LASEACTIVITION LIGAMOS IN ENDOPHRALIAL CELLS.

LASTALYTIC ACTIVITY: APP + sulfate = diphosphate + adenylylsulfate CATALYTIC ACTIVITY: ATP + adenylylsulfate = ADP + 3'-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SIMILARITY: IN THE N-TERMINAL SECTION; BELONGS TO THE APS KINASE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Probom; PD002350; APS_Ainase; 1.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        14.4%; Score 469.5; DB 1; Length 312; 47.7%; Pred. No. 1.1e-26;
                                                                                                                                                                                                                                                                                                                                        (In) Plant Gene Register PGR98-116.

-- FUNCTION: CATALYZES THE SYNTHESIS OF ACTIVATED SULFATE.

-- CATALYTIC ACTIVIT: AFP + adenylylsulfate = ADP + 3'-
phosphoadenylylsulfate.

-- PATHWAY: SECOND STEP IN THE SULFATE ACTIVATION PATHWAY.

REACTION OCCURS EARLY IN THE REDUCTIVE BRANCH OF THE CYS
BIOSYNTHEDIC PATHWAY.

-- SUBCELLULAR LOCATION: Chloroplast (By similarity).

-- SIMILARITY: BELONGS TO THE APS KINASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Probom; Pubusass, ...

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
